

Ex 6

Aim

To design and develop a prototype of an E-commerce Shopping Application using the RAD (Rapid Application Development) model, focusing on quick UI design, user interaction, and iterative development using Axure.

Procedure

1. 1. Requirement Planning

Identified key features such as Home, Categories, Product Listings, Product Details, Cart, Checkout, and Order Confirmation. Defined user actions including browsing, searching, adding to cart, and checkout.

2. 2. User Design

Designed wireframes using Axure for all major screens. Used prototype linking, reusable components, and annotations.

3. 3. Construction

Developed interactive prototypes with navigation flow from Home to Order Confirmation. Added dynamic interactions and tested the prototype.

4. 4. Cutover

Finalized the prototype, shared with stakeholders, and prepared for development handoff.

Results:

The RAD-based prototype was successfully developed with smooth navigation, interactive UI elements, and a user-friendly interface. The project demonstrated rapid development using Axure and effective usability for an e-commerce application.
