

Ex 7

Aim

To design multiple mobile app layouts with different colour schemes using GIMP and evaluate user feedback based on aesthetics and usability.

Procedure

1. 1. Design Creation

Created a mobile UI layout using GIMP with a canvas size of 1080 × 1920 pixels.

Designed

header, content, and footer sections using tools like Rectangle Select, Bucket Fill, Text Tool,

and Shape Tools.

2. 2. Layout Variations

Generated multiple layout variations by duplicating the base design and applying different

colour schemes using GIMP tools. Saved outputs as Layout1, Layout2, and Layout3.

3. 3. User Feedback Collection

Shared the layouts with users via Google Forms and collected feedback based on visual appeal, usability, readability, and colour preference.

4. 4. Analysis & Iteration

Analyzed user feedback and identified strengths and improvements for each layout.

Refined

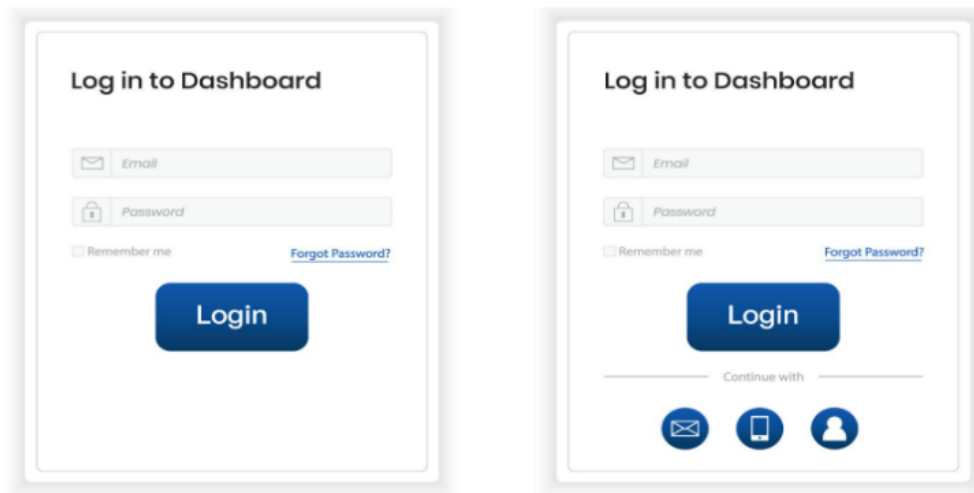

the design based on suggestions and usability considerations.

Screenshots

Results:

The experiment successfully identified the most user-preferred layout. Layout 3 was selected as the best design due to its clean, minimal, and professional appearance, along with better usability and balanced colour scheme.
