

Ex1

Aim

To analyze the drawbacks of a basic profile layout and implement modern design principles to create a functional, high-fidelity user interface.

Procedure

Phase A: Analyzing the Old UI Design (Before)

- **Placeholder Elements:** The design used a generic person icon instead of a real profile photo.
- **Simple Layout:** The profile featured a basic purple header with a centered name, "vs thamizh selvan" and a small bio.
- **Lack of Data:** The statistics section only listed "Posts," "Likes," and "Followings" without any specific numerical values.
- **Limited Content:** The feed section showed only one large image, which did not effectively showcase a full portfolio.

Building the Modified UI Design (After)

- **Visual Richness:** Replaced the flat color header with a high-resolution city cover photo and added a real profile picture for "VS Thamizh selvan".
- **Depth Effects:** Created a white border around the profile circle and overlapped it with the cover photo to create visual depth.
- **Data Accuracy:** Added specific, bold numbers for stats: 110 Posts, 600 Followers, and 250 Following.
- **Clear Call-to-Action:** Designed two distinct buttons: a solid pink "Follow" button and an outlined "Message" button for better hierarchy.
- **Grid Layout:** Implemented a 4-image portfolio grid with rounded corners to show more content at once.

Results

The transition from the "Old UI" to the "Modified UI" resulted in a design that is more professional and engaging.
