

Ex4

Aim

To design and develop a functional, multi-screen mobile application prototype using Proto.io, focusing on user navigation and interactive design elements.

Procedure

1. Project Initialization

- Navigate to <https://proto.io/> and log in to the existing account.
- Create a new project titled "Simple App Example" and select the "Mobile - iPhone X" device type.
- Initialize the first screen and name it "Home".

2. Home Screen Design

- Drag a **Header** widget to the top of the canvas and edit the text to read "Home Screen".
- Add a **Button** widget to the center of the screen and rename it "Go to Profile".

3. Profile Screen Design

- Add a new blank screen named "Profile".
- Add a **Header** labeled "Profile Screen," an **Image** widget for a profile picture, and a **Text** widget containing user information (e.g., "John Doe, Software Engineer").
- Add a "Back to Home" **Button** at the bottom of the screen.

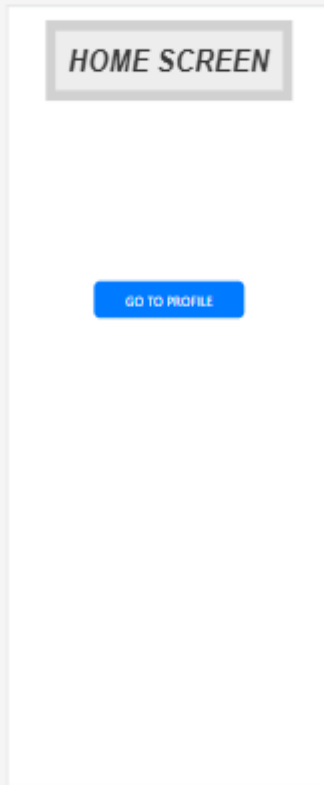

4. Setting Up Interactions

- Select the "Go to Profile" button on the Home screen and add a **Tap/Click** interaction to **Navigate to Screen** -> "Profile".
- Select the "Back to Home" button on the Profile screen and add a **Tap/Click** interaction to **Navigate to Screen** -> "Home".

5. Testing and Deployment

- Use the **Preview** mode to verify that all buttons correctly trigger screen transitions.
- Generate a **Share** link to gather feedback and evaluate the user experience.

Screen 1: Home
